Awards

TechAnkara Proje Yarışmasında ilk 100

I am a software developer specialized in creating user-friendly and performance-oriented mobile applications using Flutter. I have strong experience in backend integration, data exchange, and API management with Node.js. Additionally, I possess the ability to integrate artificial intelligence and natural language processing (NLP) technologies into projects, creating smart and interactive applications. I am also experienced in designing modern and responsive web interfaces using Vue.js and Quasar Framework. My focus is on optimizing user experience and application performance by applying best practices in both mobile and web development.

WORK HISTORY

Flutter Developer

KodFlux | 2023-09 - 2024-06

- Developed a mobile application named Sentlyz using Flutter, with a backend coded in Node.js.
- Played a key role in creating the application's AI capabilities, including building our own natural language processing (NLP) system.
- Successfully integrated AI-driven features into the mobile app, enhancing user interaction and providing intelligent responses.
- Focused on delivering a seamless and responsive user experience, applying best practices in both mobile and AI development throughout the project.

Flutter Developer

Job Clerk | 2023-11 - 2024-04

- Developed the mobile application for Job Clerk's existing website as a Flutter Developer.
- Delivered a user-friendly and high-performance mobile experience by bringing all the website's functionalities to the mobile platform.
- Successfully integrated with the backend coded in Node.js, managing data exchange and API integrations.
- Applied best practices in Flutter development throughout the project to enhance user experience and optimize application performance.

Front End Developer

Job Clerk | 2023-11 - 2024-04

- Developed the front end of the company's existing website using Vue.js and Quasar Framework.
- Delivered a user-friendly and high-performance interface by redesigning all the website's functionalities in a modern and responsive manner.
- Successfully integrated with the backend coded in Node.js, managing data exchange and API integrations.
- Applied best practices in front-end development throughout the project to enhance user experience and optimize application performance.
